

Custom Electric Insert

To fabricate a custom electric insert, we need the above dimension. The picture above represents the inside of a fireplace grate, or coal insert. The area that the coal or wood goes into. With these dimensions, we will fabricate a light box to fit, that will have enough room on the front and top to stack our faux coals.

Need to know:

- 1) The box size (width and depth), it must be able to fit into the grate from the top, if a solid grate. So make sure that the width and depth are not wider than any other part of sides, or else it cannot fit in through the top.
- 2) The height of the unit, minimum 4 ½"
- 3) Does the height need to vary, i.e. front lower than back
- 4) Any other sizes will be helpful. The unit does not need to fit perfectly to look good, it just needs to be shaped properly.

If you desire a heater fan, we will need a few photos of the unit to determine if one will work or not. These are photos of the inside, outside, and undersides of the unit. Photos can be emailed to: alex@homefiresusa.com

Prices vary depending on the complexity of the electric insert. Prices start at \$625.
