Please indicate how you learned about Homefires

In order to convert your old or existing grate/cast iron insert into a decorative gas coal fire the following conditions are required:

- You must have an existing fireplace and working flue/chimney that are suitable for burning a wood/solid fuel fire. We recommend you have the flue/chimney swept before installation. For safety & aesthetic reasons your fire must be vented properly.
- A standard match lit custom burner is made for NG only and uses 40,000 BTU/hr.
- We do have the capability of creating custom remote systems. Because a custom remote burner has a pilot flame, we can create this type of burner for use with propane gas as well as natural gas. Cost is \$950.
- A custom fitted tray may not meet code in your area, may not pass inspection in new construction, and this may make it difficult to find someone to install them.
- Homefires accepts no responsibility or liability for incidental or consequential damages.
- These units can be installed by any certified plumber or mechanical contractor. All the necessary embers, fittings and installation instructions are supplied. The match lit systems can be used with either a floor mounted key valve or gas cock.

To insure that the custom tray will fit and indeed suit the existing grate, the following information is required:

- Mail a template of the interior of your existing grate if the interior has any curves. We are able to match these precisely but have to have a hard copy to do so. If the shape is a simple rectangle or trapezoid simply supply dimensions will be suitable. The template should represent the exact size of the interior of the grate, the burner will be made ¼" less in width and the depth of the burner will be 1" less in the rear, and this is so that there is space for airflow.
- Usually, there are three types of grates/inserts we build custom burners for: a **freestanding grate removable** - where the *entire* bottom grid is removable. A **freestanding grate partial/fixed** where only part or none of the bottom is removable. And a **cast iron insert**, where the bottom and the front are one piece that mount into the firebox. Please notate which type of grate you have when ordering.
- The custom match lit burners will be made with an adjustable elbow that will allow for connection from any side. This elbow is about 1" Wide and is centered on the bottom of the burner tray. If you have a grid or part of the grate that blocks or restricts this elbow it will have to be cut out. The same applies for a remote controlled burner, except that the remote valve, tubing, and pilot assembly take up about a 6"D x 9"W area (which is usually more to the left side than the right); AND the grid will need to have at least 4" of space below to accommodate room for these components.
- Please send a few photos of the grate for visual reference; top, front, and angles.
- Please sketch the general shape of the tray to be made in the space below. Be sure to identify which side is the front and which is back.
